A Superior Strain of Delfos Cotton

"HUMCO" DELFOS 6102-38

STRAIN—3

This strain of cotton traces back to our HUMCO Delfos—6102-38, Strain-1, which was the most popular cotton of the Delfos type we ever sold in the Delta of Mississippi and Louisiana. STRAIN-1 made an enviable record and in 1928 captured four out of the first 12 places in the Louisiana five-acre cotton contest.

WELL! STRAIN-3 IS BETTER. NO! it's not better in every way, but it's just as good in every important character and **IT EXCELS IN YIELD and BOLL SIZE.** Better yield is the most important character of all, because it really means **MORE DOLLAR VALUE** per acre. (JUST WHAT EVERY FARMER WANTS.)

To get high yield in a cotton, we have to retain all the desirable qualities of type, and in this strain we have also retained the desirable **STAPLE QUALITIES**, which have been characteristic of our Delfos—38 strains in the past.

IT HAS FIVE SUPERIOR QUALITIES

1. **HIGH YIELD:** It has a record of 130 lbs. Seed Cotton per acre more than its parent strain, which means with short cotton selling at $10\frac{1}{2}\text{¢}$ per lb., an increased value per acre of between \$5.50 and \$6.00 per acre. **THAT'S WORTHWHILE.**

2. **BOLL SIZE:** This strain carries 67 bolls per lb. of seed cotton, which is larger by three bolls per lb. seed cotton than any strain of Delfos cotton we have sold. The bolls of this cotton **HARDEN QUICKLY** and this lessens Weevil Damage.

3. **LIGHT FOLIAGE:** The average Leaf Area of this strain is only 6.3 Square Inches as compared with 8.5 square inches average for the lightest foliage Cleveland Big Boll strain now offered. **THIS IS VERY IMPORTANT**, since, at least $\frac{1}{3}$ more **SUNLIGHT** gets to the bolls (to harden them quickly, to keep them from decaying before opening, and to make conditions unfavorable for the Boll Weevil). This is the lightest foliage strain we have offered, and this light foliage is conducive to the **HIGH YIELD** of this cotton.

4. **EARLINESS:** All strains of Delfos are very early fruiterers, but our strains of Delfos—38 have been exceptionally early, as shown by our Bloom Counts each year. This strain shows the Highest Blooming record to August 1st of any Full $1\frac{3}{16}$ inch strain of Delfos we have yet offered. **NONE BETTER.**

5. **STAPLE** (Length, Percentage and Quality): Delfos—6102-38, Strain-3, has Full $1\frac{3}{16}$ inch staple, turns out **34%** lint (including bagging and ties), and in quality of fibre it has shown up exceptionally well. Many buyers have commented on the fine **BODY** and **CHARACTER** of its staple.

ADAPTATION

The above qualities of this cotton make it highly desirable for rich lands. It is not a large grower and its earliness and light foliage make it most adaptable under **RICH LAND CONDITIONS**, where other cottons have a tendency to grow too large.

Why Buy "HUMCO" Seeds?

4 *Vital Reasons*

1 They are Highly Productive

- (1) **Because they are bred right.** Every strain of seed we put out must be uniform, desirable in type, a high yielder and high in money value per acre.
- (2) **Because they are graded properly.** All the light, immature, and faulty seed are removed, insuring better quality, better stands and highest yielding powers.
- (3) **Because they are tested for germination.** Only such seed as show up to a high standard are sold as planting seed. Strong vitality to insure a quick start off is reflected in highest yield.

2 They are Absolutely Pure

We grow only our finest Pedigreed Stocks under closest personal supervision. Crops are carefully inspected and rogued to keep seed up to highest standard. No seed other than ours handled at ginnery and closest supervision given to insure purity.

Our cotton seed are cleaned, sacked and tagged at the gin. At every stage they are handled to insure purity and finest quality.

3 They are Guaranteed Right

Our seed are grown and handled under the strictest supervision. Duplicate tests for germination and vitality are carefully made before they are shipped. We know their quality and we GUARANTEE THEM TO BE PURE as to variety and HIGH IN GERMINATION.

4 They Return Highest Value

(1) **In Experiment Station Tests** throughout the South, HUMCO Seeds have shown up with the best. (Look up these records.)

(2) **In the hands of the Farmers**, to whom we have sold them, they are giving finest results.
